

Installation Instructions

18SP584* – Series 60[®] EGR Three-Piece Cold Pipe Assembly Kits

*Revision: 12/23/04

Introduction

There are seven new kits for different orientations of the three-piece cold pipe assemblies. Table 1 shows the correct kit part number for its corresponding engine type.

Kit Part No.	Description
23534150	Horizontal 12L Three-Piece Cold Pipe
23534151	Horizontal 14L Three-Piece Cold Pipe
23534152	Vertical 12L Three-Piece Cold Pipe
23534153	Vertical 14L Three-Piece Cold Pipe
23534154	Vertical Dual Alt 12L Three-Piece Cold Pipe
23534155	Vertical Dual Alt 14L Three-Piece Cold Pipe
23534156	Vertical EVO 12L Three-Piece Cold Pipe

Table 1 Available Three-Piece Delivery (Cold) Pipe Assembly Kits

It is extremely important to order the correct cold pipe kit and avoid the mistake of installing a 12L kit on a 14L engine, and vice versa. This incorrect repair can cause black smoke, DDEC codes, and will adversely affect the emissions compliance of the engine.

The kits are different with regards to basic hardware configuration. Figure 1 shows the 12L and 14L venturi tubes, which, if installed incorrectly, will cause the above-mentioned operational problems. Figure 2 shows the location of the model number on the block as well as a brief description of the letters used in a model number that identify a 12L from a 14L engine.

NOTE:

DO NOT BEND THE VENTURI TUBES FOR ANY REASON. If during the repair process, the Delta Pressure Sensor lines need to be “bent” to be connected, an improper kit is probably being used.

Installation

Perform the following steps to assemble and install a three-piece delivery pipe system. For clarity, instructions will pertain to a 14L horizontal manifold truck three-piece cold pipe kit. See Figure 3 for a typical diagram of a three-piece cold pipe assembly.

NOTE:

Install hose clamps on pipes before installing hoses.

1. Loosely install L-bracket to the top of the camshaft cover and S-bracket to the exhaust manifold. Invert P-clip on engine wire harness. Attach to L-bracket.

NOTE: This note is only for engines equipped with the air compressor inlet check valve mounted on TOP of the gear case:

A very small number of engines will require a different L-bracket than what was supplied in the kit. Engines equipped with the air compressor Inlet Check Valve (ICV) mounted on top of the gear case with bracket P/N: 23530896, will need to have new L-bracket P/N: 23532777 installed, instead of the L-bracket that comes in the kit.

2. Install hose on delivery pipe mixer-section and secure with spring clamp. Install hose on venturi section and secure with spring clamp.
3. Loosely install mixer section of delivery pipe to the intake manifold using band clamp.
4. Loosely install the venturi and center section on the EGR cooler using a clamp.
5. Align delivery pipe mid-section with the mixer section. Push the end of the delivery pipe mid-section onto the hose connection and secure with spring clamp.
6. Loosely install Delta-P tubes to venturi section and rotate venturi to align tubes with Delta-P sensor.
7. Loosely install P-clips (two at L-bracket and one at S-bracket).
8. Tighten the delivery pipe to intake mixer clamp to 12 N·m (106 lb·in.).

NOTE:

The seal between the intake manifold and the mixer is *not* required.

9. Tighten the clamp at the delivery pipe to cooler to 12 N·m (106 lb·in.).
10. Tighten the bolt and nut connecting the two P-clips to the gusseted L-bracket and the single P-clip to the S-bracket to 30-38 N·m (22-28 lb·ft).
11. Tighten the L-bracket bolts in the camshaft gear cover to 58-73 N·m (43-54 lb·ft).
12. Tighten the bolt into the heat shield to 30-38 N·m (22-28 lb·ft).
13. Tighten the Delta-P tube nuts to 24-28 N·m (18-21 lb·ft).
